

TECHNICAL TRAINING LAB INSTRUCTIONS

Lab 4-1

Lab – Reviewing Prerequisites

In this short exercise, you'll review prerequisite knowledge recommendations and become familiar with other written resources provided for this class.

1. On your USB flash drive (or in your "Class Resources") navigate to the "Additional Documentation" folder and open and read the Kapow10 – Training Preparation.pdf file. If you find yourself lacking in any of the knowledge areas discussed, note these and come up with a plan to acquire that knowledge. Doing so will optimize your understanding of Kofax Kapow and make you a more proficient robot developer. Explore the hyperlinks provided for you toward the end of the document
2. Examine the titles of the other PDFs we've given you. These serve as what are intended to be valuable "cheat sheets" for the topics in their titles.
